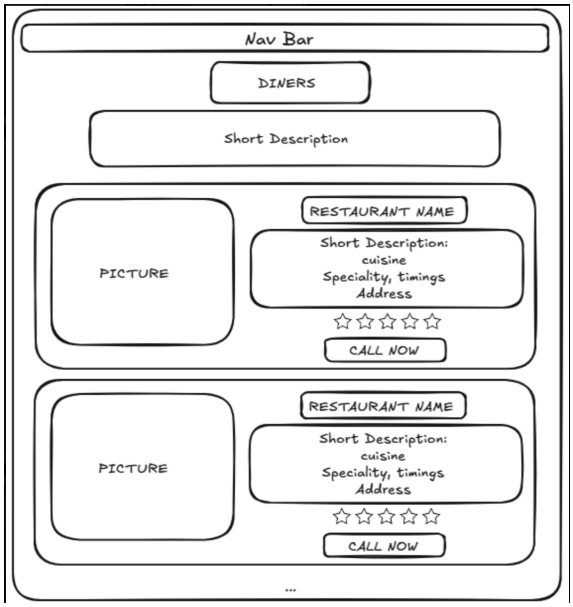
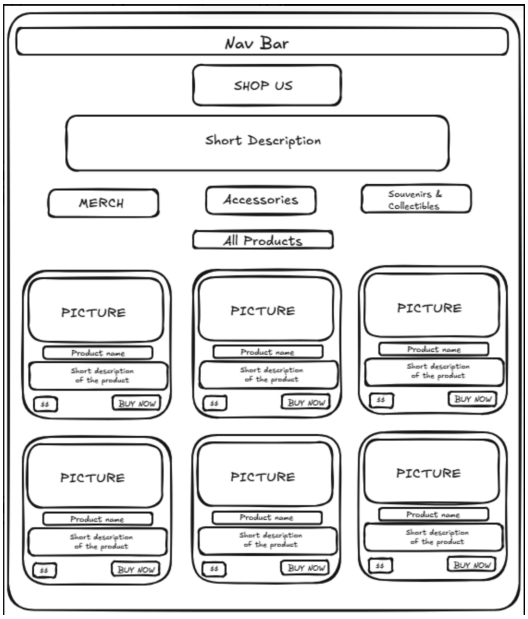
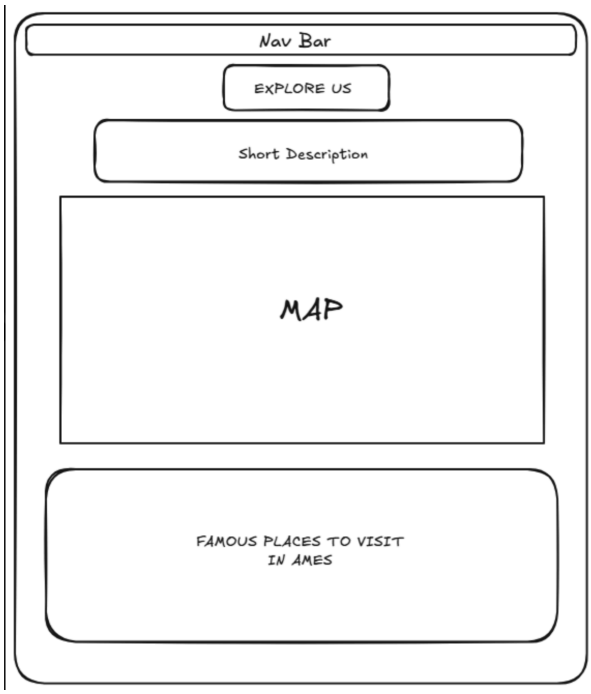
Mini Assignment 2 Documentation

NM_5 – Anish Reddy Nukala Prajwal Reddy Chenreddy

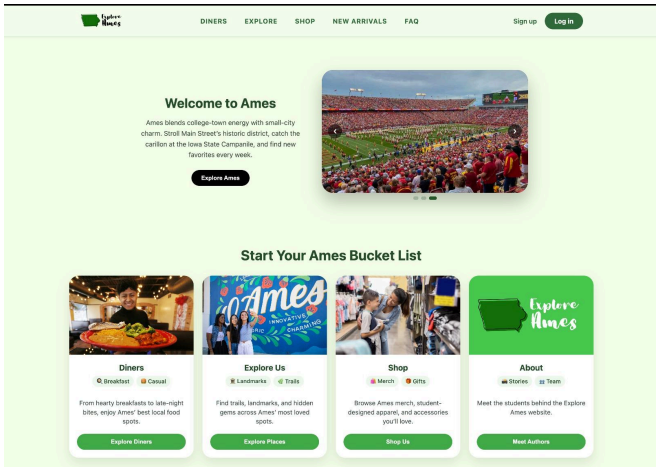
These sketches represent the updated planning for my new functional pages: Diners, Shop, and Explore. They show the layout structure, card design, navigation, and content placement before implementation

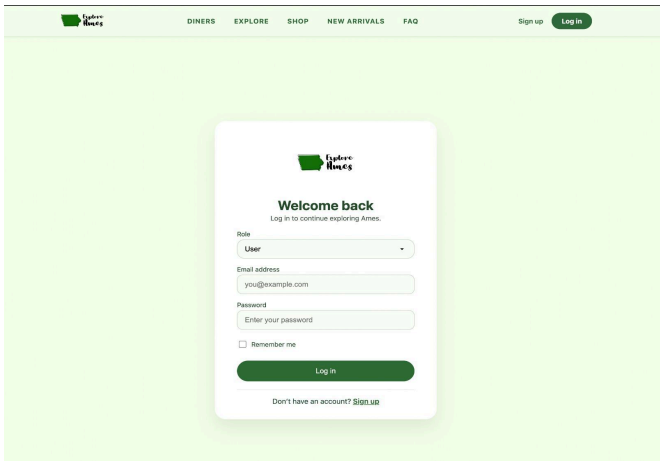


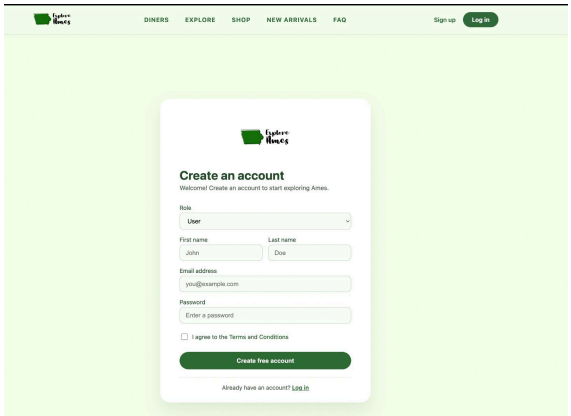


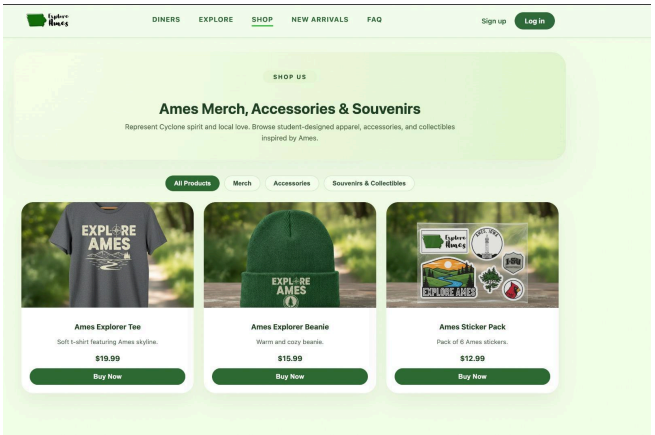


These screenshots show the pages I implemented as part of Mini-Assignment 2. The pages include navigation, dynamic content, styling, and frontend logic. The Shop page fetches data from the backend, while Login and Signup include role-based authentication.

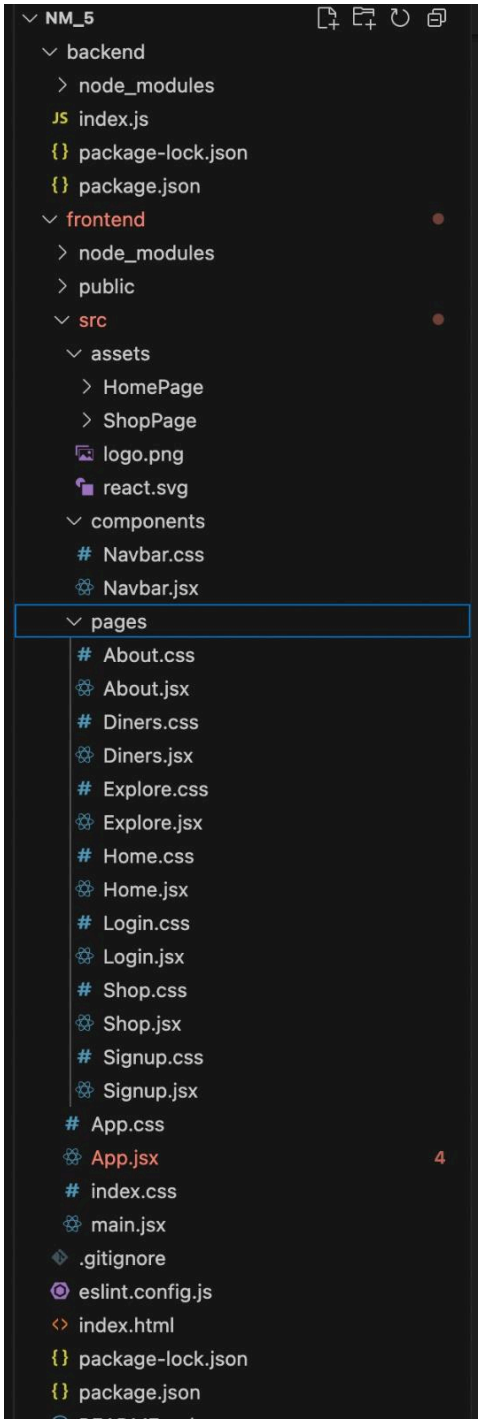




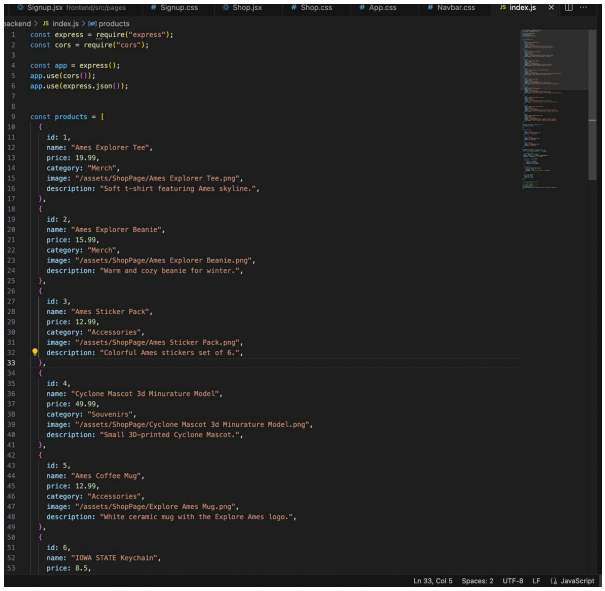




This screenshot displays the complete folder structure for both frontend and backend. The backend folder contains the Express server, while the frontend folder includes React pages, components, and assets.



The backend was implemented using Node.js and Express. I created mock datasets for products and users. Two main API routes were added: `/api/shop` to return product data to the frontend and `/auth/login` to validate credentials and roles.



```javascript
const express = require("express");
const cors = require("cors");

const app = express();
app.use(cors());
app.use(express.json());

const products = [
  {
    id: 1,
    name: "Ames Explorer Tee",
    price: 19.99,
    category: "Merch",
    image: "/assets/ShopPage/Ames Explorer Tee.png",
    description: "Soft t-shirt featuring Ames skyline.",
  },
  {
    id: 2,
    name: "Ames Explorer Beanie",
    price: 15.99,
    category: "Merch",
    image: "/assets/ShopPage/Ames Explorer Beanie.png",
    description: "Warm and cozy beanie for winter.",
  },
  {
    id: 3,
    name: "Ames Sticker Pack",
    price: 12.99,
    category: "Accessories",
    image: "/assets/ShopPage/Ames Sticker Pack.png",
    description: "Colorful Ames stickers set of 6.",
  },
  {
    id: 4,
    name: "Cyclone Mascot 3d Minurature Model",
    price: 49.99,
    category: "Souvenirs",

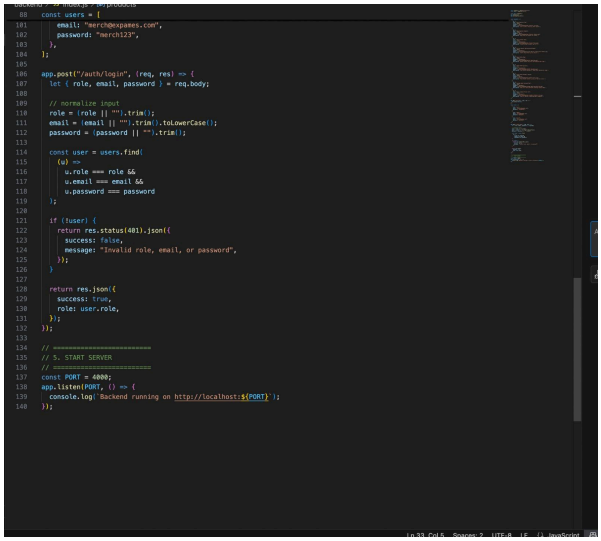
app.post("/auth/login", (req, res) => {
  let { role, email, password } = req.body;

  // normalize input
```



```javascript
const users = [
    email: "merch@expames.com",
    password: "merch123",
  },
];

app.post("/auth/login", (req, res) => {
  let { role, email, password } = req.body;

  // normalize input
  role = (role || "").trim();
  email = (email || "").trim().toLowerCase();
  password = (password || "").trim();

  const user = users.find(
    (u) =>
      u.role === role &&
      u.email === email &&
      u.password === password
  );

  if (!user) {
    return res.status(401).json({
      success: false,
      message: "Invalid role, email, or password",
    });
  }

  return res.json({
    success: true,
    role: user.role,
  });
});

// ======================
// 5. START SERVER
// ======================
const PORT = 4000;
app.listen(PORT, () => {
  console.log(`Backend running on http://localhost:${PORT}`);
});
```

This screenshot confirms that React Router is properly configured and supports navigation across pages without reloading.
